

painted a grim picture of the future should we fail to aggressively limit greenhouse gas emissions.<sup>1</sup>

As a result of numerous current and legacy racist policies and practices, people of color are disproportionately more likely to have multiple pre-existing health conditions, to face social disadvantages and environmental risks that make them more vulnerable to climate change. People of color are also 3.6 times more likely than white people to live in areas experiencing the worst air pollution.<sup>2</sup>

As you negotiate a path forward to seeing investment legislation passed into law, we urge you to recognize the urgency of climate action and to include the following provisions:

- **Establish long-term clean energy tax incentives.** Ten-year tax incentives for clean electricity, energy storage and transmission will help drive innovation and deployment of pollution-free energy, and the inclusion of these tax incentives in the final bill will represent a large portion of the emissions reductions needed to reduce climate-warming greenhouse gas emissions 50% by 2030.
- **Rapidly transition to zero-emission vehicles and technology.** The transportation sector is the largest contributor to greenhouse gases and a significant source of air pollution. Making it easier to purchase electric vehicles, including medium- and heavy-duty vehicles, through tax credits and incentives, paired with investments in the necessary charging infrastructure to support them, will have immediate health benefits by way of reductions in air pollution and long-term benefits by reducing climate pollution.
- **Commit to environmental justice by ensuring 40% of investments in clean air go to frontline communities.** Any efforts to reduce air and climate pollutants should not worsen existing inequities and should direct benefits to the communities that have been disproportionately burdened by air pollution and climate change.

Investing in efforts to reduce climate change is an opportunity to protect both physical and mental health— particularly for underserved communities – that Congress and the nation can't afford to miss. The below organizations urge swift and bold investments towards a healthier future.

Sincerely,

Academic Pediatric Association

Allergy & Asthma Network
